

CYBER SAFETY CHECKLIST

There are a multitude of cyber threats out there - remember, you need to protect your data in the same way you'd protect your material possessions!

Some of the top cyber threats include malware, web-based attacks, phishing, web application attacks, spam, denial-of-service attacks (DDoS), identify theft, data breach, insider threats, botnets, physical manipulation damage, theft, and loss, information leakage, ransomware, cyberespionage and cryptojacking.

You can protect yourself online by following this checklist:

- Back up online and offline files regularly and securely
- Strengthen your home network
- Use strong passwordsKeep your software updated
- Manage social media profiles
- Check privacy settings
- Avoid opening and delete suspicious emails or attachments
